

# Archaeology Challenge

Lucius has made a list of some of the most common items found on an archaeological site  
Can you find them all in the scenes on the other page?  
There is also a spot the difference puzzle to solve

## Bucket

Useful for collecting up natural earth and stones etc which archaeologists call discard.

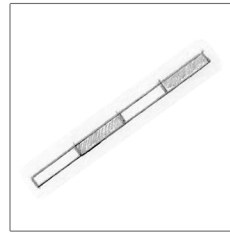

## Trowel

One of the most used tools on a dig site, which is used for removing small amounts of earth.

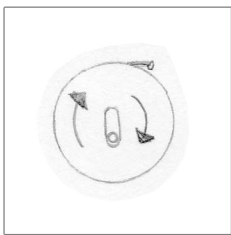

## Pot Sherd

These are pieces of broken pottery and are a common find – there are lots of types from many different centuries

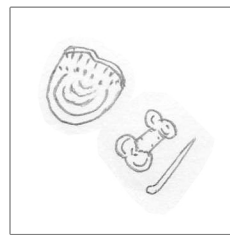

## Metre Stick

These are used to accurately mark out and show the size of large features or objects

## Measuring Tape

These are used to take long measurements of large features like walls

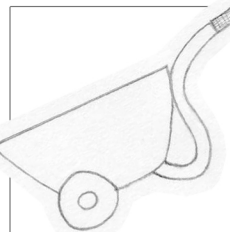

## Ecofacts

These are objects that come from plants and animals, and include shells, bones, and seeds

## Knapped Flint

These are often thousands of years old and were used like knives to cut and scrape

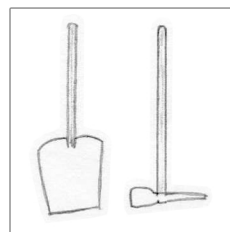

## Wheelbarrow

This is useful for taking away a large amount of earth, which is usually added to a mound

## Soft Brush

A good tool for cleaning up loose earth to uncover details on objects and in features

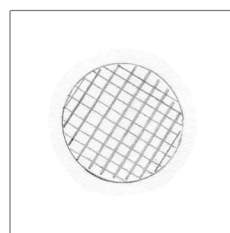

## Shovel and Mattock

These are used to loosen and remove large amounts of earth and stones

## Metalwork

There are lots of types of metal objects mostly made from Iron, Copper, Lead – Silver and Gold are rarer

## Sieve

This is useful for finding small objects which are sometimes hidden amongst discarded earth
